Due: 3/03/25 at 11:59pm

This problem set covers material from Week 3, dates 2/24 - 2/27.

Instructions: Write or type complete solutions to the following problems and submit answers to the corresponding Gradescope assignment. Your solutions should be neatly-written, show all work and computations, include figures or graphs where appropriate, and include some written explanation of your method or process (enough that I can understand your reasoning without having to guess or make assumptions). A general rubric for homework problems appears on the final page of this assignment.

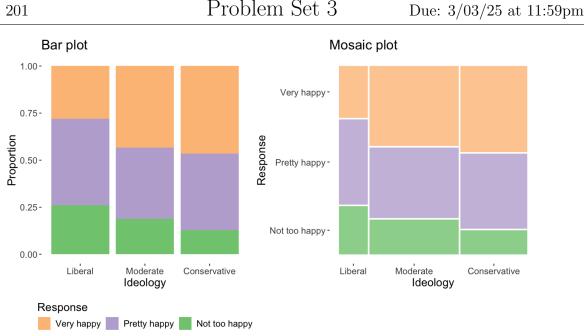

#### Monday 2/24

1. In 2008, the General Social Survey randomly polled Americans over the age of 65. The respondents were asked about their political ideology and degree of happiness. The results of the 321 people surveyed are shown below.

	Not too happy	Pretty happy	Very happy
Liberal	13	23	14
Moderate	29	59	67
Conservative	15	47	54

Be sure to show your work!

- (a) What percent of these respondents identified themselves as moderate?
- (b) What percent of respondents identified as very happy?
- (c) What percent of these respondents identified themselves as moderate and very happy?
- (d) What percent of these respondents who identified themselves as moderates are very happy? What percent of conservatives share this view? What percent of liberals share this view?
- (e) In 2008, did political ideology and happiness appear to be associated among Americans over 65? Explain your reasoning.
- 2. The figure below visualizes the data from Exercise 1 using two different types of plots: a standardized bar plot and a mosaic plot. Based on the data in the table from Exercise 1 and using the plots below, answer the following:
  - (a) In the mosaic plot, what are the widths and heights of the rectangles proportional to?
  - (b) What do you think the areas of each rectangle in the mosaic plot correspond to?
  - (c) What aspects of the data are present/visible in the mosaic plot but not the standardized bar plot?
  - (d) Are there scenarios where you might prefer the bar plot over the mosaic plot? (No single right answer here!)

#### Wednesday 2/26

Begin working through the .qmd assignment found on the website. Note that there is a rendered version for easier reading.

## Thursday 2/27

Continue working through the .qmd assignment found on the website. For grading purposes, R problems 3 and 4 will be graded as a single problem, as will 6 and 7.

### Due: 3/03/25 at 11:59pm

# General rubric

Points	Criteria
5	The solution is correct and well-written. The author leaves no
	doubt as to why the solution is valid.
4.5	The solution is well-written, and is correct except for some minor
	arithmetic or calculation mistake.
4	The solution is technically correct, but author has omitted some key
	justification for why the solution is valid. Alternatively, the solution
	is well-written, but is missing a small, but essential component.
3	The solution is well-written, but either overlooks a significant com-
	ponent of the problem or makes a significant mistake. Alternatively,
	in a multi-part problem, a majority of the solutions are correct and
	well-written, but one part is missing or is significantly incorrect.
2	The solution is either correct but not adequately written, or it is
	adequately written but overlooks a significant component of the
	problem or makes a significant mistake.
1	The solution is rudimentary, but contains some relevant ideas. Al-
	ternatively, the solution briefly indicates the correct answer, but
	provides no further justification.
0	Either the solution is missing entirely, or the author makes no non-
	trivial progress toward a solution (i.e. just writes the statement of
	the problem and/or restates given information).
Notas	For problems with multiple parts, the seem represents - belietie
Notes:	For problems with multiple parts, the score represents a holistic review of the entire problem. Additionally, half-points may be used
	if the solution falls between two point values above.
Notes:	For problems with code, well-written means only having lines of
Notes.	code that are necessary to solving the problem, as well as presenting
	the solution for the reader to easily see. It might also be worth
	adding comments to your code.
	adding comments to your code.
